Safe, secure and flexible

Argus is communication software that runs alongside existing patient clinical software to provide safe, simple and secure electronic transfer of clinical and patient data.

Argus was designed around health practitioner workflows and runs in the background allowing users to work uninterrupted.

Health professionals who use patient clinical software can create referral letters, patient health summaries, encounter reports and other clinical correspondence and send them directly from within their letter writing facility via Argus. Incoming documents can be viewed, automatically matched and directly filed in the relevant patient record of your clinical software.

For those without an electronic patient clinical record system, reports can be prepared and sent directly from the ArgusWord interface we developed for Microsoft Word (for Windows). Incoming documents can be viewed in Microsoft Word.

Argus can significantly reduce organisational resource and staffing costs associated with the handling, storage, retrieval, backup and risk management of paper documents.

Interfaces

Argus interfaces with dozens of patient clinical software products, including all major practice clinical software.

Features

Key features and functionality includes:

- Argus Message Viewer (enhanced in Argus 5) for managing and monitoring message status and history
- Argus Address Book Manager (enhanced in Argus 5) synchronises recipient addresses and their associated PKI security keys with the Argus Users Directory (AUD)

- Argus Stats (new feature in Argus 5) for reviewing and reporting on use
- Auto-online upgrades
- Argus 5 is the pathway to future interconnectivity with other clinical messaging services

Security & Delivery Assurance

Patient privacy and communication security are assured by:

- The use of Public Key Infrastructure (PKI) encryption which ensures only the intended recipient can read documents sent to them
- Computer to computer interoperability via the HL7 messaging structure integrity and automatic matching of doctor and patient for filing in patient clinical software
- HL7 receipt acknowledgement process for delivery assurance and audit trail

Licensing, Installation and Support

For GP, Specialist and Allied Health practices, the ArgusMessenger software licence and support are bundled in an annual paid subscription which covers:

- All software upgrades and new version releases available online.
- Technical problem rectification and operator Help Desk assistance.
- Unlimited assistance. No time limit or number-of-call limit.
- Problem resolution by phone, email and remote access
- Available by phone during normal business hours.

ArgusEnterprise licencing and support fees for larger organisations are scaled on the size of the organisation.

Installation of Argus can be done remotely by our trained Argus Support team or Certified Argus Installers available throughout Australia.
